

Task P8.1.3

To solve this problem I need to add orderDate in INSERT statement as it is not nullable.

```
INSERT into Purchase (custName, orderedDate) VALUES ('Max Wang', '2016-05-12');
```

```
COMMIT;
```

And then I can update the shipDate afterwards with given statement as it is nullable.

Another solution can be making orderedDate initially 0 and then update that latter on as it will be easy to find all the rows with orderedDate set as 0.

```
INSERT into Purchase (custName, orderedDate, shipDate)  
VALUES ('Max Wang',0, '2016-05-12');
```

```
UPDATE Purchase SET orderedDate = "2016-05-06" WHERE  
custName = 'Max Wang' AND orderedDate = '0000-00-00';
```

```
COMMIT;
```
