

Fundamentals of Data Management

Pass Tasks 7.1.3: SQL DML - Queries

Overview

In this tutorial, you will practise using SQL for querying a relational database.

Purpose

Learn to write SQL queries to find information in a relational database.

Task

Solve the tasks given below.

Time

This task should be completed in your seventh lab class and submitted for feedback in the seventh lab or at the beginning of lab 8. This tutorial is longer than others and tutorial 8 will be shorter, so you can continue with these tasks in lab 8.

Resources

- Elmasri & Navathe, Fundamentals of Database Systems Chapter 4
- Connolly & Begg, Database Systems, Chapter 6
- Churcher, Beginning SQL Queries, Chapters 2 and 3:

Pass Tasks 7.1.3 — Submission Details and Assessment Criteria

Document your solutions to the tasks using a word processor. Upload the solutions to Doubtfire as pdf. The tutors will discuss them with you in the lab.

Consider the following schema:

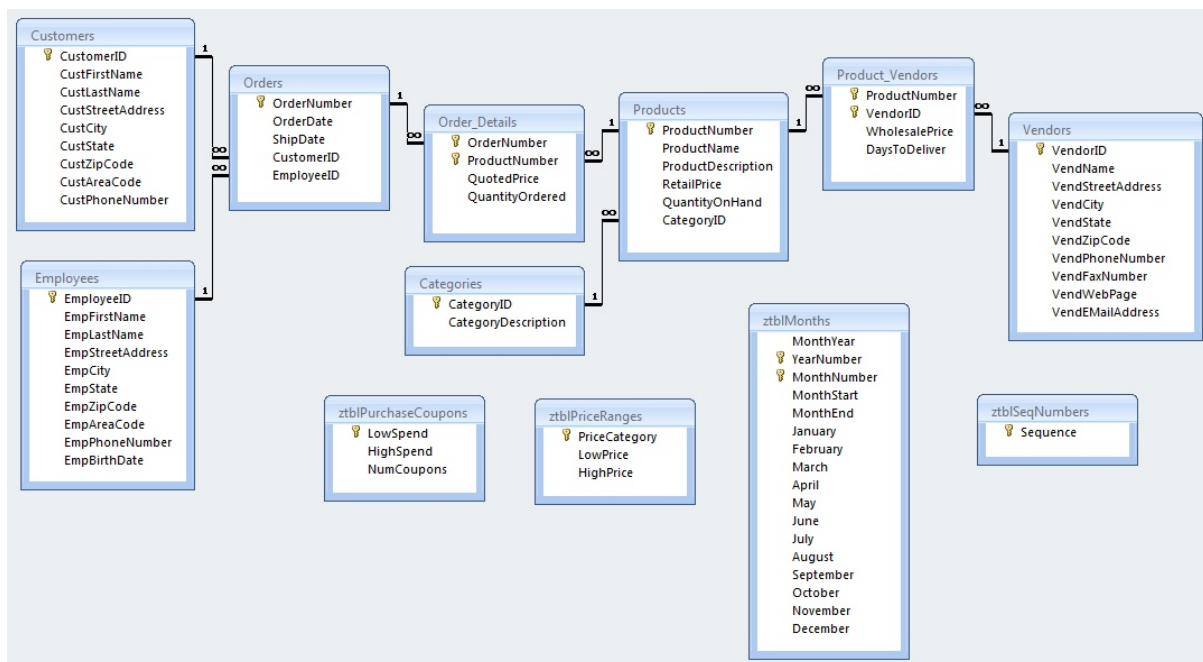

Figure 1: Sales Orders Database

Subtask 7.1.3

Write a query that shows the number of customers for per state as shown below (the query from part a to show the numbers for each of the states:

Customers	CustState
7	CA
4	OR
6	TX
11	WA

Hint: You have to use the count function and GROUP BY to this.

Document the query.
